EDUCATION

Mahatma Gandhi Institute of Technology (MGIT)
Bachelor of Technology in Computer Science and Engineering
GPA: 9.1/10

Hyderabad, India
2024 – 2028

TECHNICAL SKILLS

Languages:	C, C++, Java, Python, JavaScript
Frontend:	HTML, CSS, React.js, React Hooks, Tailwind CSS, Bootstrap, Vite
Backend:	Node.js, Express.js, Flask, Server Side Rendering (SSR)
Databases:	MongoDB, MySQL, SQLite, SQL
Core CS:	Data Structures & Algorithms, Operating Systems, Computer Networks, DBMS, OOP, System Design
Libraries & APIs:	REST API, WebSockets, Socket.IO, JWT, Multer, Cloudinary, Stripe, Pandas
Data Analytics:	EDA, Tableau
Developer Tools:	Git, GitHub, Postman, Vercel, Render

PROJECTS

Local Lynk | *React, Node.js, Express.js, MongoDB, Socket.IO, JWT, Cloudinary* [GitHub](#) local-lynk.vercel.app

- Architected JWT Authentication and RBAC for buyers, sellers, and admins with Express.js middleware.
- Integrated Socket.IO for real-time chat and Multer + Cloudinary for image uploads with validation.
- Designed MongoDB schema modeling with Mongoose indexing for optimized querying.
- Secured REST APIs with Helmet.js and JWT refresh token rotation, deployed on Vercel.
- Boosted application smoothness by ~76% and cut UI lag/interaction delays by ~49% via optimized MongoDB queries and frontend rendering.

Rail Pulse | *Flask, React.js, pandas, REST APIs* [GitHub](#) rail-pulse-5t74.vercel.app

- Built Flask + React analytics platform with 7 advanced search modes backed by pandas API pipelines.
- Designed versioned REST API contracts with JSON response schemas for clean frontend-backend separation.
- Applied React Hooks optimization (useMemo, useCallback, lazy loading) for 7,000+ station datasets.
- Powered by 14,500+ real train records across all 19 railway zones and 7,000+ active stations, with real-time train update integration.
- Layered in extensive UI animations while achieving ~85% smoother rendering; optimized React rendering and API handling for large datasets.

Solo Leveling Fitness App | *Node.js, Express.js, MongoDB, SSR* [GitHub](#) solo-leveling-fitness-model-app.onrender.com

- Developed a gamified fitness tracking system with a credit-based reward and penalty mechanism using server-side rendering (SSR).
- Increased user engagement by rewarding task completion and penalizing inactivity; served all pages via SSR for faster initial load and better SEO.
- Improved mobile loading performance by ~62% and desktop animation smoothness by ~58% through optimized SSR rendering.
- Boosted SEO score by ~40% via optimized SSR rendering and better search engine indexing.

CODING PROFILES

LeetCode (vikash1630) — 150+ problems solved across arrays, trees, graphs, and dynamic programming.

GeeksforGeeks (mvikask6kb) — 170+ DSA problems covering data structures and algorithmic problem-solving.

ACHIEVEMENTS

- Solved 320+ Data Structures & Algorithms problems across LeetCode (150+) and GeeksforGeeks (170+), covering graphs, trees, recursion, and linked lists.
- Runner-up at KL University Hackathon among 120+ participating teams.
- Finished in the Top 7 at JNTUH Brain O Vision Hackathon among 150+ participating teams.
- Academic Excellence: CGPA 8.9/10 throughout B.Tech, consistent top performer since Semester 1.

CERTIFICATIONS

CampusX DSMP 1.0 — Data Science Master Program covering Python, pandas, data visualization, and EDA.

Striver's A2Z DSA Sheet — Comprehensive coverage of graphs, trees, dynamic programming, recursion, and linked lists.

Full Stack Development — MERN Stack specialization with real-world project deployment on Vercel and cloud platforms.
